MODULAR SYSTEMS

CORRUGATED "MICROALVEOLAR" SHEETS

LIGHT MANAGEMENT

The Caleido project line is dedicated to the realization of facades and coverings with innovative aesthetic and architectural solutions. The arcoPlus® panels and the Policarb® multiwall sheets can be colored to modulate the light transmission, optimize the shadow effect thereby allowing a lower heating of the internal environment. The new extrusion technology with double color allows to satisfy the chromatic needs of the project, at the same time dosing the light transmission recreating particular settings.

IR TREATMENT

Temperature control and heat management are essential elements in maintaining a desired level of comfort within buildings. They are also critical elements for cost control and maximization of energy savings.

Policarb®IR, Policomp®IR sheets and modular arcoPlus®IR panels make up dott. Gallina's new product range for transparent coverings and windows with solar control. All products from the IR line offer innovative solutions for typical building applications where high levels of light are wanted while reducing the internal heating.

The products of the IR line absorb the part of the light relative to the infra-red rays (from 780 to 1400nm), effectively blocking the solar heat, while letting the solar light through.

The potential result: reduced energy spending for cooling and for lighting as well as higher comfort.

AR TREATMENT

When a high efficiency of light transmission within a building is needed AR treatment can enable a better distribution of the light intensity on the surface, reducing reflections and dazzling.

THE PRODUCTION

The production of modular panels with transparent or translucent colors, and the use of the new double color technology, allows dott. Gallina to propose various solutions for applications on walls and coverings. Both multiwall and solid sheets, as well as modular arcoPlus® systems offer an incredible liberty of design, in the applications such as skylights, tunnels, greenhouses, gazebos due to a vast range of available products.

PoliCarb®

MULTIWALL U.V. PROTECTED POLYCARBONATE SHEETS

for roofing, windows, skylights, greenhouses, porches, gazebos, ceilings

TECHNICAL FEATURES

Linear thermal expansion	0,065mm/m°C
Temperature range	-40°C +120 °C
U.V. protection	Coextrusion (both sides upon request)
Fire reaction EN 13501	EuroClass B-s1,d0

DESCRIPTION

The characteristic structure of the multiwall sheets with air space inside guarantees good thermal insulation and excellent resistance to crash stress. The external side of Policarb® is coated with U.V. protection (both sides on request) warranting resistance to aging due to atmospheric agents and UV rays.

ADVANTAGES

- ❖ Light transmission
- ❖ Resistance to U.V. rays and to hail
- ❖ Energy saving
- ❖ Economical

**POLYCARBONATE SOLID SHEETS
WITH U.V. PROTECTION
ON BOTH SIDES**

high versatility for work in construction
and industry

← **2.500mm** →

DESCRIPTION

The development of extrusion technology has allowed the construction of a unique plant in Europe for the production of solid polycarbonate sheets of various thicknesses and colors, up to 2,500 mm wide.

The polycarbonate product range is divided into solid Policomp® sheets, with UV protection on both sides, and Scudo® sheets, without UV protection, ideal for industrial applications.

LIGHTNESS

Compared to normal glass structures, Policomp® and Scudo® sheets considerably reduce the weight of the structures.

A solid polycarbonate sheet weighs 50% less than a sheet of glass of the same thickness.

ADVANTAGES

- ❖ **Only plant that produces up to 2.500 width**
- ❖ **Impact resistance**
- ❖ **Resistance to U.V. rays and to hail**
- ❖ **Light transmission**

----------	------	------	------	------	------	------	------	------	------

LIGHT TRANSMISSION

Policomp® sheets have good light transmission properties and are also available in bronze and opal.

COEXTRUSION

A layer of high-performing UV absorber is coextruded onto both sides of Policomp® sheets. It filters the light and protects the polymer against the effects

of aging, ensuring excellent impact strength even after prolonged exposure to sunlight.

SAFETY

Scudo® sheets are used in safety glazing applications, for machine tool guards. Policomp® sheets are used instead for roofing, vertical windows and advertising signs.

CORRUGATED U.V. PROTECTED POLYCARBONATE SOLID SHEETS

for translucent curtain walls
and roofing application

TECHNICAL FEATURES

Thickness	1,0 mm
Light transmission	90%
U.V. protection	Coextrusion
Linear thermal expansion	0,065 mm/m°C
Temperature range	-40 ÷ 120 °C
Fire reaction EN 13501	EuroClass B-s1,d0

DESCRIPTION

TEGOLUX® is a corrugated solid polycarbonate sheet produced in various sections for the realization of skylights, walls, translucent covers and may be matched with roofing sheets and insulated panels.

The versatility of this product allows you to create gutter ridge as well as transversal skylights.

ADVANTAGES

- ❖ Transverse and longitudinal overlap
- ❖ Self-extinguishing
- ❖ Resistance to U.V. rays
- ❖ Light transmission

PROFILES

COMPATIBLE WITH:

The profiles in polycarbonate TEGOLUX® are compatible with the most common insulating panels for coverage, such as: Isolpack DELTA5, Isopan ISO-COP5-1000, Marcegaglia TD5, Italpannelli PENTA01, Lattonedil EURO5, Alubel28, Greca76/18, Onda 76/18.

For more information on product compatibility, contact the technical sales office of dott.Gallina.

LIGHT TRANSMISSION

The corrugated sheets TEGOLUX®, unlike other products, allow a maximum light transmission throughout the day.

The minimum support structures, the high transparency and the trapezoidal shape of the profile, make TEGOLUX® the ideal product for the diffusion of natural light inside the building.

DESCRIPTION

This modular systems all have a tongue and groove connector system. The structure is specifically designed to ensure a weatherproof finish. They are particularly suitable for roofing applications, continuous translucent glazing and false ceilings.

ADVANTAGES

- ❖ Self-extinguishing
- ❖ Light transmission
- ❖ Resistance to U.V. rays and to hail
- ❖ Thermal insulation

U.V. PROTECTED POLYCARBONATE CORRUGATED SHEETS WITH “MICROALVEOLAR” STRUCTURE for roofing and transparent curtain walls

TECHNICAL FEATURES

Thickness	2,5 - 3,0 mm
Thermal insulation	4,6 W/m ² K
Light transmission	Crystal 85% - Opal 70%
UV rays protection	Coextrusion
Linear thermal expansion	0,065 mm/m°C
Temperature range	-40 ÷ 120 °C
Fire reaction EN 13501	EuroClass B-s1,d0

DESCRIPTION

TEGOPLUS® corrugated sheet of polycarbonate “microalveolare” structure produced in different profiles for the construction of skylights, walls, transparent roofs also in combination with cover plates and insulated panels. The versatility of this product allows you to create skylights, gutter-ridges or eave inter-layers.

N.B. TEGOPLUS® corrugated sheets can be supplied with thermowelded ends.

ADVANTAGES

- ❖ Transverse and longitudinal overlap
- ❖ Self-extinguishing
- ❖ Resistance to U.V. rays

PROFILES

U.V. side

COMPATIBILITY

Corrugated polycarbonate sheets TEGOPLUS® are compatible with the most widespread insulating roofing panels, such as: Isolpack DELTA5, Lat-tonedil EURO5, Isopan ISOCOP5-1000, Marcegaglia TD5, Italpannelli PENTA01, Alubel28, Onda102/25,

Onda76/18, Onda 177/51.

For more information about the compatibility of these products please contact directly dott. Gallina's technical sales office.
